Bangalore, India | +91-8871383015 | shubh12531@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Backend Engineer with strong expertise in Java, Spring Boot, Microservices, Hibernate, and RESTful API development. Proven track record of optimizing application performance, designing secure authentication systems, and building scalable backend services. Delivered impactful solutions including a 35% reduction in API response time and support for 5x higher concurrent workloads. Passionate about developing reliable, maintainable, and high-performing software systems.

KEY ACHIEVEMENTS

- Achieved **35% improvement** in API response time through Redis caching and SQL query optimization on a live production AI hiring platform.
- Scaled backend microservices architecture to handle a **5x concurrent user load** with zero performance degradation.
- Reduced manual hiring pipeline intervention by **60%** through implementation of fully automated AI-driven interview workflows.
- Improved database query response time by **25–30%** using Hibernate ORM optimization, index tuning, and efficient schema design.
- Delivered production-ready features across **2 companies within the first year** of professional experience, maintaining consistent uptime.

TECHNICAL SKILLS

Languages: Java, Advanced Java, Python

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Django, FastAPI, Redis

Databases: MySQL, Oracle SQL

API & Architecture: REST API Design, Microservices Architecture, System Design, JWT Authentication, JDBC, Servlets, OOP, LLM, RAG

Web Technologies: HTML5, CSS3, JavaScript, React.js

Cloud & DevOps: Docker, GitHub Actions (CI/CD), Render, Railway

Tools & IDEs: IntelliJ IDEA, Eclipse, VS Code, Git, Maven

Concepts: Scalable Systems, High Availability, API Performance Optimization, Secure Authentication, Agile, Debugging

PROFESSIONAL EXPERIENCE

Iosys Software India Pvt. Ltd. | Software Developer

Oct 2025 – Present

aipoint.ai – AI-Powered Hiring Platform

- Architected and developed **RESTful APIs** using Java and Spring Boot for an AI-powered hiring platform, supporting high-availability concurrent interview sessions.
- Engineered end-to-end AI-driven interview workflows — automated video recording, cloud storage integration, and evaluation pipelines — reducing manual intervention by **60%**.
- Implemented enterprise-grade authentication and RBAC using JWT and Spring Security, achieving **zero unauthorized access incidents** in production.
- Optimized API response times by **35%** through Redis caching, SQL query tuning, and systematic refactoring of inefficient backend logic.
- Designed and scaled microservices to handle a **5x increase** in concurrent interview sessions with zero performance degradation.
- Collaborated with frontend and AI teams in an Agile (Scrum) environment, delivering bi-weekly sprint releases with consistent **99%+ uptime**.

Resilience AI | Java Full Stack Developer Intern

Jul 2024 – Feb 2025

- Developed and maintained full-stack web applications using Java, Spring Boot, MySQL, HTML5, CSS3, and JavaScript.
- Designed and integrated RESTful APIs connecting backend services with relational database systems, improving data retrieval efficiency.
- Built responsive UI components and collaborated with cross-functional teams to deliver feature enhancements on schedule.
- Performed systematic debugging, unit testing, and performance optimization, improving overall application reliability.
- Utilized Git for version control and actively participated in Agile practices including daily standups and sprint planning.

PROJECTS

aipoint.ai – AI-Powered Hiring Platform

Tech Stack: Java, Spring Boot, REST APIs, MySQL, Redis, JWT, Spring Security, Docker, AI Integration

- **Problem:** Traditional hiring processes lacked automation, resulting in slow candidate screening and inconsistent evaluation outcomes.
- **Solution:** Designed and built a distributed backend system with microservices for candidate management, interview scheduling, video session handling, and AI-based evaluation workflows.
- Implemented secure, role-based REST APIs for recruiter and candidate portals using JWT and Spring Security, achieving zero security incidents post-deployment.
- Integrated video recording and cloud storage APIs for real-time session handling, supporting up to **100 concurrent candidates**.
- **Impact:** Reduced hiring cycle time by **50%**, improved evaluation consistency, and enabled fully automated interview workflows with scalable infrastructure.

Parking Management System

Tech Stack: Java, Spring Boot, Hibernate, MySQL, REST APIs

- **Problem:** Manual parking slot allocation led to inefficiency, long wait times, and poor resource utilization.
- **Solution:** Built a full-featured backend system with real-time slot tracking, automated vehicle registration, and role-based access control using Spring Boot and Hibernate.
- Designed RESTful APIs for slot allocation, vehicle tracking, and availability status with a normalized relational database schema in MySQL.
- Optimized Hibernate ORM queries to reduce database round-trips, achieving a **25% improvement** in slot query response time.
- **Impact:** Enabled real-time slot management, reduced manual coordination by **70%**, and improved overall system usability for end users.

EDUCATION

Bachelor of Technology – Computer Science Engineering Technocrats Institute of Technology (Excellence), Bhopal CGPA: 7.98 / 10	2020 – 2024
Intermediate – PCM Holy Child Hr. Sec. School 67.4%	2019 – 2020
Matriculation Aaditya Hr. Sec. School 74%	2016 – 2017

CERTIFICATIONS

- Java Certification – CodeChef
- SQL Certification – CodeChef
- Java Full Stack Development Course – JSpiders

STRENGTHS

- **Quick Learner & Adaptable** – Rapidly onboards new technologies and frameworks to meet evolving project demands.
- **Problem-Solving Mindset** – Breaks down complex technical challenges into structured, efficient, and scalable solutions.
- **Strong Communication** – Effectively collaborates with cross-functional teams including frontend, AI, and product stakeholders.
- **Attention to Detail** – Writes clean, well-documented code with a focus on performance, security, and maintainability.
- **Self-Motivated & Ownership-Driven** – Takes end-to-end ownership of features from design to production deployment.
- **Team Player** – Thrives in Agile/Scrum environments, contributing consistently to sprint goals and team success.
