Bangalore, India

PROFESSIONAL SUMMARY

Backend Engineer specializing in Java ecosystem technologies, with practical experience designing and deploying scalable backend services using Java, Spring Boot, Hibernate, and REST APIs. Strong understanding of microservices design patterns, API security, performance tuning, and relational database optimization. Built production-grade backend modules supporting AI-powered workflows, asynchronous processing, and real-time platform operations. Familiar with distributed system principles, clean architecture, and cloud deployment practices, with the ability to deliver reliable backend systems in fast-paced Agile environments.

TECHNICAL SKILLS

Programming Languages: Java, Advanced Java

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Redis

Databases: MySQL, Oracle SQL

API & Architecture: REST API Design, Microservices Architecture, JWT Authentication, JDBC, Servlets, OOPs, System Design

Web Technologies: HTML5, CSS3, JavaScript, React.js

Cloud & DevOps: Docker, GitHub Actions (CI/CD), Render, Railway

Tools & IDEs: IntelliJ IDEA, Eclipse, VS Code, Git, Maven

Concepts: Scalable Systems, High Availability, API Performance Optimization, Secure Authentication, Agile Development, Debugging

PROFESSIONAL EXPERIENCE

Iosys Software India Pvt. Ltd. | Software Developer

Oct 2025 – Present

- Architect and develop RESTful APIs using Java and Spring Boot for AIPoint.ai, an AI-powered hiring platform serving concurrent interview sessions with high availability.
- Integrated end-to-end AI-based interview workflows including automated video recording, cloud storage handling, and evaluation pipelines, reducing manual intervention by 60%.
- Implemented enterprise-grade authentication and role-based access control using JWT and Spring Security, ensuring zero unauthorized access incidents in production.
- Optimized API response times by 35% through query tuning, caching with Redis, and refactoring inefficient backend logic.
- Engineered scalable microservices to support 5x increase in concurrent interview sessions without degradation in system performance.
- Streamlined development workflows by implementing code review processes and automated build systems, reducing integration conflicts by 40% and ensuring reliable bi-weekly sprint deliveries.

Modus Software Solutions Pvt. Ltd. | Software Engineer

Apr 2025 – Oct 2025

- Developed modular backend services using Java and Spring Boot for a banking software system, improving overall system scalability and reducing downtime by 20%.
- Built and deployed secure RESTful APIs with JWT authentication and Spring Security, supporting role-based workflows across multiple user tiers.
- Optimized complex SQL queries and Hibernate ORM mappings, achieving a 30% reduction in average database response time and improving throughput.
- Integrated third-party APIs and backend business logic for core banking operations including transaction processing and account management.
- Collaborated with cross-functional teams across design, QA, and product in an Agile development cycle to deliver production-ready features on schedule.

KEY ACHIEVEMENTS

- Achieved 35% improvement in API response time through Redis caching and query optimization on a live AI hiring platform.
- Scaled backend microservices to handle 5x concurrent user load without performance degradation.
- Reduced manual hiring pipeline intervention by 60% via automated AI-driven interview workflows.
- Reduced database query response time by 30% using Hibernate optimization and index tuning in a banking domain application.
- Successfully delivered production-ready features across 2 companies within first year of professional experience.

PROJECTS

aipoint.ai – AI-Powered Hiring Platform

Tech Stack: Java, Spring Boot, REST APIs, MySQL, Redis, JWT, Spring Security, Docker, AI Integration

- Problem: Traditional hiring processes lacked automation, resulting in slow candidate screening and inconsistent evaluation.
- Solution: Designed and built a distributed backend system with microservices for candidate management, interview scheduling, video session handling, and AI-based evaluation workflows.
- Implemented secure, role-based REST APIs for recruiter and candidate portals with JWT and Spring Security, achieving zero security incidents post-deployment.
- Integrated video recording and cloud storage APIs for real-time interview session handling, supporting up to 100 concurrent candidates.
- Impact: Reduced hiring cycle time by 50%, improved candidate evaluation consistency, and enabled fully automated interview workflows with scalable infrastructure.

Parking Management System

Tech Stack: Java, Spring Boot, Hibernate, MySQL, REST APIs

- Problem: Manual parking slot allocation led to inefficiency, long wait times, and poor resource utilization.
- Solution: Built a full-featured backend system with real-time slot availability tracking, automated vehicle registration, and role-based user access control using Spring Boot and Hibernate.
- Designed RESTful APIs for slot allocation, vehicle tracking, and availability status with a normalized relational database schema in MySQL.
- Optimized Hibernate ORM queries to reduce database round-trips, achieving 25% improvement in slot query response time.
- Impact: Enabled real-time slot management, reduced manual coordination by 70%, and improved system usability for end users.

EDUCATION

Bachelor of Technology – Computer Science Engineering

2020 – 2024

Technocrats Institute of Technology (Excellence), Bhopal **CGPA: 7.98 / 10**

Intermediate – PCM

2019 – 2020

Holy Child Hr. Sec. School **67.4%**

Matriculation

2016 – 2017

Aaditya Hr. Sec. School **74%**

CERTIFICATIONS

- Java Certification – CodeChef
- SQL Certification – CodeChef
- Java Full Stack Development Course – JSpiders

STRENGTHS

- Quick Learner and Adaptable – Rapidly onboards new technologies and frameworks to meet project demands.
